Ensure™ Conditioner

Water Quality Enhancer

Softens Water ♦ Improves Filtration ♦ Extends Sanitizer Life ♦ Applied Once a Season

Ensure Conditioner is a once-a-season treatment that provides the foundation for the Ensure System, imparting sparkling clear water and improved swimmer comfort. This product is not lost through evaporation, is not affected by sunlight, and does not affect other chemicals. It is lost only through backwash-to-waste and swimmer “splash-out.” In addition to imparting sparkling clear water and improved swimmer comfort, Ensure Conditioner does not affect pH when added to the pool.

FEATURES & BENEFITS

- 💧 Treat once per pool season.
- 💧 Provides superior swimmer comfort.
- 💧 Convenient, easy to use.
- 💧 Extends sanitizer life.
- 💧 pH buffered.
- 💧 For use in all pool systems.

APPLICATION

- 💧 Ensure all pool equipment is working properly. Backwash and/or clean the filter system following manufacturer's directions. If necessary, adjust the pH to 7.2 to 7.6; Total Alkalinity to 100 to 150 ppm; and Calcium Hardness to 200 to 275 ppm. Do not allow pH to fall below 7.0. When using other products as outlined in the directions for this product, always follow directions on those products.
- 💧 Remove all other chemicals from the skimmer and/or feeder.
- 💧 **DOSAGE:** Add Ensure Conditioner at a dosage rate of five (5) lbs. per 4,000 gallons of pool water.
- 💧 With the pump and filter system operating, pour Ensure Conditioner into the skimmer very slowly. Break the entire recommended dosage into 5 lb. increments introduced into the skimmer at 30 minute intervals. Continue operating the system for a minimum of 8 hours per day. Do not backwash the filter for 2 to 3 days and only when necessary.
- 💧 Shock the pool with a granular chlorinating product* (in chlorine, bromine, salt, or UV treated systems) following label directions, to establish a chlorine residual. Test for free available chlorine 48 hours after shocking. If the free available chlorine level is less than 1.5 ppm, repeat the shock treatment.

* *Ensure MultiShock, Cal-Shock, or other EPA registered granular chlorine source.*

WEEKLY SHOCK TREATMENT with ENSURE™ MULTISHOCK

- 💧 Check and adjust pH, calcium hardness and total alkalinity levels.
- 💧 Shock using 16 ounces (one bag) per 12,000 gallons of water to yield 5 to 10 ppm available chlorine. Follow all label directions. Available chlorine level must be below 4 ppm before re-entering the pool.
- 💧 Ensure MultiShock not only provides an excellent shock, but replenishes Ensure Conditioner lost to backwash and splash-out.
 - **Note:** *Additional shocking may be required depending on water and weather conditions.*

AVAILABILITY: Ensure Conditioner is available in 50, 25, 10 and 5 lb pails.
